HOW IT WORKS

01 Material Feed

Mixed material is fed onto the top deck and spread across the full width of the screen cloth.

02 Stratification

Fines pass through the mesh to lower decks while oversize lumps ride over the top to the discharge chute.

03 Multi-Output

Each deck discharges its own size grade (e.g. +40mm, 20-40mm, -20mm) to separate hoppers or conveyors.

APPLICATIONS

Coke Oven Plants	Separating coke breeze from usable blast furnace coke lumps.
Coal Washeries	Sizing raw coal before washing and dewatering clean coal.
Stone Crushing	Grading aggregates, gravel and sand.

COMMON QUESTIONS

What materials can it handle?

Mainly coke, coal and iron ore; also stone aggregates and other minerals.

Can I change the output size?

Yes. The wire mesh screens are interchangeable with different aperture sizes.

How many sizes can I get at once?

A 3-deck machine gives 4 output sizes (oversize + 3 grades).

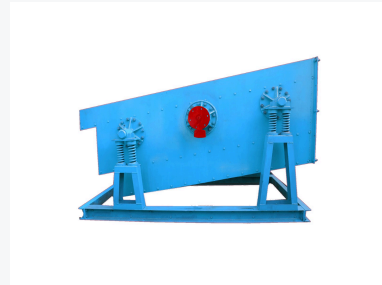

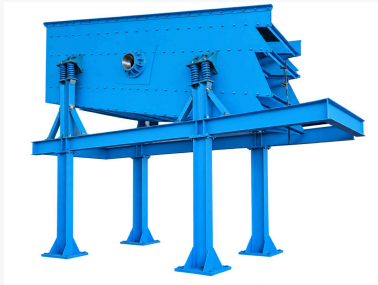

What motor does it use?

Typically a 1440 RPM, 3-phase induction motor from 7.5 HP to 15 HP.

Is the vibration adjustable?

Yes, by changing the counterweights on the flywheels / eccentric shaft.
