PUSHER MACHINE

WITH ROLLER STAMPING ARRANGEMENT

KEY CAPABILITY:

A rail-mounted pusher machine for stamp-charged coke ovens. It combines a 20-metre pusher beam (40 HP drive) with a roller stamping system for uniform coal cake density.

DRIVES

- ✓ Main Pusher Motor: 40 HP
- ✓ Long Travel Motor: 15 HP
- ✓ Stamping Drive: 7.5 HP
- ✓ Total Connected Load: approx. 65 - 70 HP

CONSTRUCTION

- ✓ Pusher Beam: 20 m (Heavy Fabrication)
- ✓ Leveller Beam: 20 m (Rack & Pinion)
- ✓ Helical Gearbox & Chain Drive
- ✓ Suits ovens up to 11 m long

HOW IT WORKS

1. Coal Stamping

Coal fines are fed in and the roller stamping system compacts them into a high-density cake.

2. Charging

The machine travels on rails along the battery and aligns with the oven.

3. Coke Ejection

After carbonisation, the pusher beam rams the finished coke mass out of the oven.

APPLICATIONS

Coke Ovens	Horizontal coke ovens that use stamping technology.
Steel Plants	Producing high-density metallurgical coke for blast furnaces.
Coal Carbonisation	Consistent coal cake density for uniform carbonisation.

COMMON QUESTIONS

Q. What is the maximum oven size?

A. The standard 20-metre beam suits ovens up to 11 metres long. Custom lengths are available.

Q. Why roller stamping?

A. It is faster and needs less maintenance than drop-hammer systems, with continuous compaction.

Q. What is the power requirement?

A. About 65 - 70 HP connected load (40 HP main + 15 HP travel + 7.5 HP stamping + auxiliaries).

Q. Is the operation automated?

A. Semi-automatic: travel and alignment are motorised, stamping and pushing are panel-controlled.

Q. Does it include the charging box?

A. It is usually part of the oven structure, but we can fabricate a mobile charging box if required.
