# Pusher Machine

With Roller Stamping Arrangement

## AT A GLANCE

A rail-mounted pusher machine for stamp-charged coke ovens. It combines a 20-metre pusher beam (40 HP drive) with a roller stamping system for uniform coal cake density.

## KEY SPECIFICATIONS

BEAM LENGTH  
**20 Meters**

MAIN MOTOR  
**40 HP (Elec.)**

LONG TRAVEL  
**15 HP Motor**

SYSTEM  
**Roller Stamping**

## SPECIFICATIONS

|                      |                                 |
|----------------------|---------------------------------|
| Main Pusher Motor    | <b>40 H.P.</b>                  |
| Long Travel Motor    | <b>15 H.P.</b>                  |
| Stamping Drive       | <b>7.5 H.P.</b>                 |
| Total Connected Load | <b>Approx. 65 - 70 H.P.</b>     |
| Pusher Beam          | <b>20 m (Heavy Fabrication)</b> |
| Leveller Beam        | <b>20 m (Rack &amp; Pinion)</b> |

### DESIGN & DURABILITY

- ✓ Helical gearbox and chain drive
- ✓ Rack and pinion leveller beam
- ✓ Suits ovens up to 11 m long
- ✓ Rail-mounted travel along the battery

## BUYING INFORMATION

|                      |                                                                          |
|----------------------|--------------------------------------------------------------------------|
| <b>Lead time</b>     | Made to order. Ask us for the current lead time.                         |
| <b>Warranty</b>      | 1 year, as on all our machinery.                                         |
| <b>Installation</b>  | Installation supervision and commissioning available.                    |
| <b>Custom builds</b> | Capacity, motor power and dimensions matched to your plant and drawings. |

---

## HOW IT WORKS

---

### 01 Coal Stamping

Coal fines are fed in and the roller stamping system compacts them into a high-density cake.

---

### 02 Charging

The machine travels on rails along the battery and aligns with the oven.

---

### 03 Coke Ejection

After carbonisation, the pusher beam rams the finished coke mass out of the oven.

---

## APPLICATIONS

---

|                           |                                                               |
|---------------------------|---------------------------------------------------------------|
| <b>Coke Ovens</b>         | Stamp-charged horizontal coke ovens.                          |
| <b>Steel Plants</b>       | Producing high-density metallurgical coke for blast furnaces. |
| <b>Coal Carbonisation</b> | Consistent coal cake density for uniform carbonisation.       |

---

## COMMON QUESTIONS

---

### What is the maximum oven size?

The standard 20-metre beam suits ovens up to 11 metres long. Custom lengths are available.

### Why roller stamping?

It is faster and needs less maintenance than drop-hammer systems, with continuous compaction.

### What is the power requirement?

About 65 - 70 HP connected load (40 HP main + 15 HP travel + 7.5 HP stamping + auxiliaries).

### Is the operation automated?

Semi-automatic: travel and alignment are motorised, stamping and pushing are panel-controlled.

### Does it include the charging box?

It is usually part of the oven structure, but we can fabricate a mobile charging box if required.
